

BIONEMATICIDE

Nematode Protection USING BIO WITH BITE.™

Majestene® Bionematicide Increasing Your Crop Yields

A breakthrough in biological control of economically damaging nematodes, Majestene offers growers a new choice in a dwindling selection of nematode management tools: broad spectrum, exempt from residue tolerances, for conventional & organic production.

EFFECTIVE AGAINST:

- Root Knot
- Lesion
- Dagger
- Stunt
- Cyst
- And many more...

CAN BE USED IN ORGANIC PRODUCTION

A BREAKTHROUGH IN BIOLOGICAL CONTROL OF NEMATODES

- Broad spectrum suppression & control of economically damaging soil insects & nematodes
- No waiting period for planting
- Can be used at planting or post planting
- No plant-back restrictions
- Tolerance exempt
- Approved for field and greenhouse applications

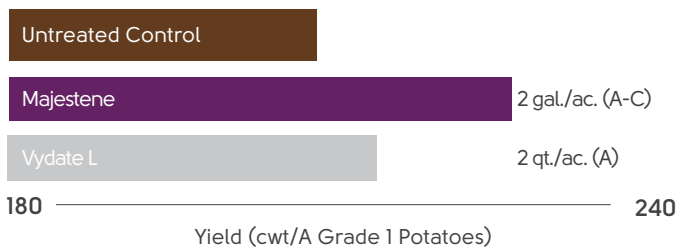

In Trials

Majestene has proven effective in controlling or suppressing crop damaging nematodes.

MAJESTENE HIGHLIGHTS

- No plant-back restrictions
- Can be used at planting or post planting
- Broad spectrum suppression and control of economically damaging soil insects and nematodes
- Approved for field and greenhouse applications

Nematodes dead or paralyzed
48 hours after treatment

CAN BE USED IN ORGANIC PRODUCTION

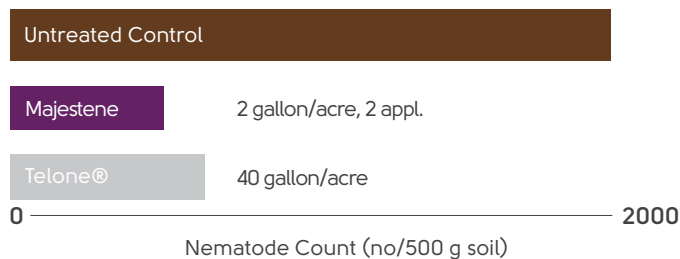

BASIC USE INSTRUCTIONS

Use as a soil drench, in-furrow, at planting and as a seed drench
It can also be applied through drip irrigation, T-banded or shanked-in
Reapply every 28 days for effective nematode control
Reapply every 3-4 weeks for season-long control

ALWAYS READ AND FOLLOW LABEL INSTRUCTIONS

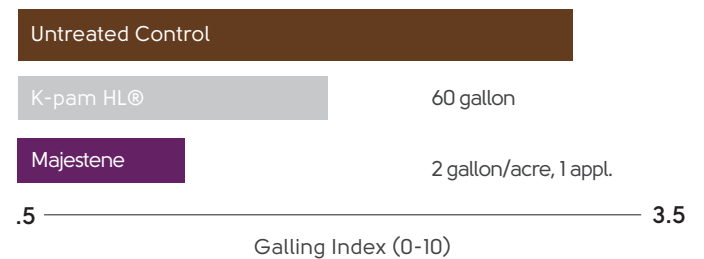

STRAWBERRIES, NEMATODES (ADULTS)

Plant City, FL-2016

TOMATOES, ROOT KNOT NEMATODE

Homestead, FL-2015
